

FILTRATION

Filtration, a precision product and science, if done right!

Filtration is a science and for many years has been a "black art". To make a filter, particularly a membrane filter free from leaks is one of the most difficult production processes known to man. It should be remembered that fluids take the path of least resistance and if that path is through a manufacturing defect then your filter has a rating of the size of that defect not the filter. A 0.2 micron filter can easily be no better than 150 micron if badly manufactured.

There are more untested and invalidated filters in the market these days than good ones, so why pay more than you need to when by buying from ADEPT Pure Water Techniques you can buy filters of a guaranteed "pedigree", produced under ISO 9001:2000 in full clean room conditions.

Produced by one of the largest filtration groups ADEPT Pure Water Techniques can assure you that you are using a product of quality, an integral filter and your filter does what it says on the packet, filters to the stated micron rating.

Backed by one of the most comprehensive laboratory support capabilities in the UK, ADEPT Pure Water Techniques can give you quality, honesty and savings in the cost per litre of filtration.

ADEPT PURE WATER TECHNIQUES FOR ALL YOUR WATER PURIFICATION EQUIPMENT AND SERVICE NEEDS
